PROFESSIONAL SUMMARY

AI Specialist with less than 1 year of experience building production data pipelines and AI-enabled systems in semiconductor manufacturing. Specializes in Python, SQL, ETL, PostgreSQL, Oracle, and Generative AI/RAG. Built pipelines across 5 enterprise databases and migrated 15M+ rows into PostgreSQL.

WORK EXPERIENCE

AI Specialist (Contract), ASE Co., Ltd. – Philippines Branch

Jan 2026 – Present

- **Equipment Management System**

- Coordinated with UPH, die/site analytics, tester, and log owners to translate process requirements into data solutions.
- Developed Python pipelines from Oracle and MS SQL Server to PostgreSQL with incremental loads and soft-delete change detection.
- Standardized inconsistent equipment names through equipment mapping for reliable machine-level analytics.
- Built ETL workflows converting ASC, STDF, and DAT tester logs into structured PostgreSQL data for dashboards and performance analytics.
- Developed and deployed a Flask-based PostgreSQL web viewer, enabling browser access to the terminal-only server environment.

- **Planning Management System**

- Coordinated with planners to capture domain calculations and translate business rules into database workflows.
- Led the data team in shifting migration workloads to Oracle, reducing unnecessary data movement and processing effort.
- Guided use of Oracle Views, Materialized Views, Procedures, DB Links, and nested CTEs for reporting and data processing.
- Built an automated web-CSV-to-Oracle pipeline running every five minutes for timely planning data.

- **Merit Management System**

- Coordinated with Operations, Logistics, and HR on KPI requirements, validation rules, and business processes.
- Supported development of a Generative AI KPI validator using job descriptions to assess target/zero metrics against employee scope.
- Built logic to transform raw KPI scores into validated scores using standardized target- and zero-based formulas.

On the Job Trainee, Camel Appliances Manufacturing Corp

July – Sept 2024

- Assisted with internal audits, 5S, and workplace safety activities
- Developed a mobile application for Time and Motion Study, reducing manual work.

PROJECTS

- **Generative AI & RAG Project** — Developed a Generative AI application implementing Retrieval-Augmented Generation and AI-assisted information retrieval.
- **Automated Egg Weight Prediction & Size Classification System** — Developed an image-processing and ML system integrating OpenCV, YOLO, Python, Raspberry Pi, Arduino, Flask, SQLite, Linear Regression, Decision Tree, and Random Forest for automated prediction/classification and inventory integration.

EDUCATION

Bachelor of Science in Computer Engineering

GPA: 1.79

Lyceum of the Philippines University – Cavite, SY 24-25

- Information Technology Specialist in Databases — Passed 6/3/2024
- Basic Occupational Safety and Health (BOSH) Training — Passed 5/23/2024
